

TAGGING CONTENT FOR DIFFERENT ACTIVITIES

ABSTRACT

The present invention is directed to a system and method for classification of media content based upon user-defined classifications. A compilation of media content in conformity with the user-defined classifications and desired criteria may be automatically produced in accordance with the present invention. Another advantage of the present invention is the ability to select pieces of media content. The system and method of the present invention may also be capable of selecting pieces of media content depending upon the user's mood and current activity.
